

Let's improve cloud integration

Secure editing in Office 365

Connect 365 makes it easy for all systems to edit documents in Office Online, without compromising on data security.

Overview

With Connect 365 you give your staff the ability to work securely on all platforms:

- **Secure editing in Office 365**
All systems can use Connect 365's API and give the user access to secure online editing in Office online from all platforms.
- **Avoid random copies in OneDrive**
Connect 365 temporarily places the documents in an encrypted location in Microsoft Azure behind secure access management.
- **Save money on Office licenses**
With Connect 365, mobile users can be downgraded to a less expensive Office license plan.
- **Prioritise data security**
Connect 365 was developed with data security as a top priority, and personal data never leaves the EU.

Features

Unlock the potential in Office Online with Connect 365:

- **Secure access**
Connect 365 builds on the highest standards of best practice in authentication through Micro-

soft's own security layer. The user is validated based on his or her Office 365 Tenant association, and all documents are stored only temporarily and fully encrypted.

- **Best practice**
Dania Software is a certified Microsoft Cloud Storage Partner. Document management solutions can integrate with Connect 365 through an API with secure access management.
- **Platform-independent**
Connect 365 helps mobile users with secure online access to document editing with the help of Office 365. Documents are stored temporarily in an isolated environment in Microsoft Azure, and after editing is complete, the document is delivered back to the system of origin and deleted in Connect 365.
