

# Let's improve signatures

## Signatures for Office & Office 365

OutlookSignature ensures automatic uniformity in all email signatures in Microsoft Outlook and Office 365. The signature is generated dynamically based on the user's profile and is visible in your email before transmission.

### Overview

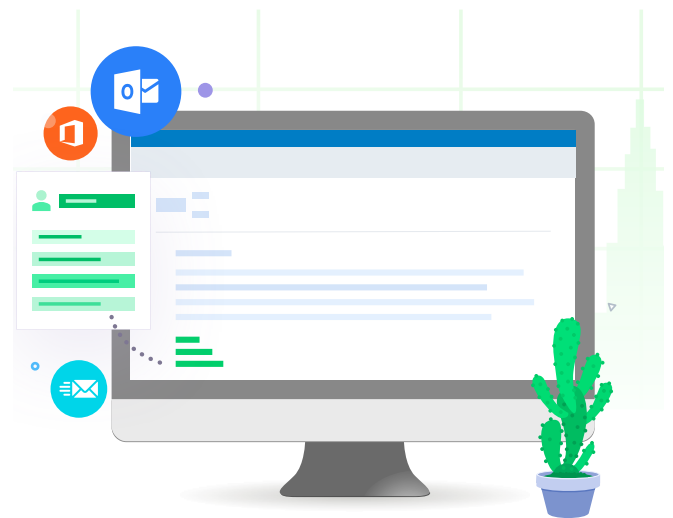

Signature for all platforms that provides a professional and uniform design:

- **Strengthen your branding in emails**  
With the signature solution from Dania Software, all users automatically get one or more dynamic signatures.
- **Minimise maintenance**  
The signature is set up with dynamic elements such as text, logo and campaign graphics etc., which are filled in automatically based on data from AD and Azure AD.
- **Get a reliable solution**  
OutlookSignature is a reliable solution that inserts all signatures in the user's email for a final check before transmission.

### Features

OutlookSignature is a flexible and dynamic signature solution for Office 365.

- **Dynamic elements**  
OutlookSignature uses the user's information from AD or Azure AD to insert dynamic elements.

- **Platform-independent**  
OutlookSignature uses a unique technology to generate dynamic signatures and makes them visible in the users' emails before transmission. The solution is designed with special focus on Microsoft's Outlook.
- **Special signature**  
With OutlookSignature, a special in-house signature can be used, where superfluous graphics and text can be removed to make in-house correspondence clearer. In addition, OutlookSignature accounts for reply emails.
- **Easy for IT**  
OutlookSignature installs on user systems as an MSI installation package for the Outlook client applications or via the manifest file in your Office 365 Tenant.
