

Add-on Rule Engine

Make your Standard Content intelligent with the Rule Engine

The Rule Engine add-on for DynamicTemplate is used to automate the selection and insertion of content into a document.

This automation can be based on the data held in connected business systems e.g. EDRMS, or based on the end-user's previous selections within the same document. This saves times and reduces the likelihood of errors.

Simplified workflow

Standard Content administrators can use the Rule Engine to define logic within Standard Content items, reducing the end-user's workload to an absolute minimum number of clicks and options.

This minimises the risk of the end-user choosing incorrectly or mistyping an input when creating a new document. In addition, the process of producing final documents is simplified, saving time on a daily basis.

The add-on can be used to insert references to relevant legislation, or other Standard Content or attachments, based on the selections made by the user when the document is created.

Training and skill development in rule building

Dania Software's experienced consultants are on hand to help Standard Content administrators get comfortable with automation using the Rule Engine.

Standard Content administrators can attend a workshop to gain insight and hands-on experience using the Rule Engine to meet their organisation's needs

Advantages

- **Fewer clicks for end-users**
- **Simplified document creation**
- **Automated calculations of amounts and dates**
- **Usage of data from EDRMS, specialist- and business systems**
- **Automated insertion of Standard Content and attachments**
- **Simple and intuitive for Standard Content administrators**
